

ThreadLightly

CHANGING BEHAVIOR, ONE SNAP AT A TIME

**We have all bought something we later
regretted**

The image shows a room filled with discarded clothing. On the left, a rack is overflowing with various garments, including a patterned dress and a white shirt. In the center and right, there are large, messy piles of clothes on a light-colored sofa and on the floor. The clothes include a red jacket, a yellow shirt, a striped shirt, and various other pieces of fabric. The overall scene conveys a sense of overwhelming excess and waste.

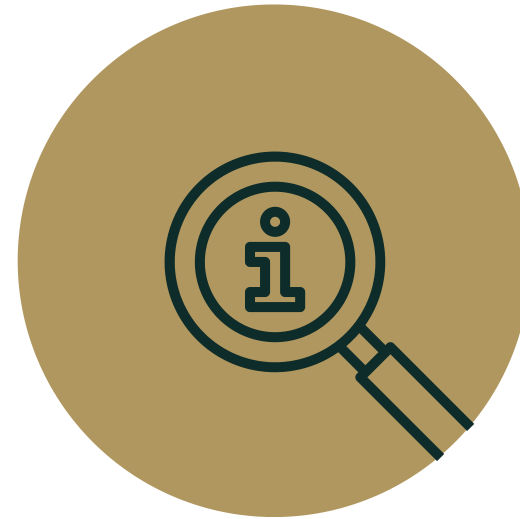

**Over 92 million tonnes of fashion waste
every year**

Problem Statement

Sustainable shopping isn't as easy as it sounds.

No Time

No Clear Information

Brands Hide Impact

Young shoppers can't easily judge sustainability when buying¹.
Most fixes come too late, after the damage is done.

Real change must happen **BEFORE** purchase.

¹ McKinsey & Company. (2023, June 6). The price is not right: Gen Z's sustainable-fashion conundrum. [McKinsey & Company, The Price is Not Right: Gen Z's Sustainable-Fashion Conundrum](#)

Our Solution

ThreadLightly is an AI-powered tool that reveals the hidden impact of clothes.

Key Features:

Materials Scanner & Sustainability Score

Similar Sustainable Alternatives

Impact Dashboard & Rewards System

Why this works

Validated our **Figma prototype** with several users and collected feedback through a survey.

*"It **highlighted the issues** in fashion that I **don't normally think about.**"*

*"I like the thought of using AI to look for sustainable options, this can make it more **convenient** for a wider audience."*

*"I really liked the **snap label feature**, it was super easy to use and gave me instant info about the material and how sustainable the item is."*
