ABOUT THREADLIGHTLY

Our Mission

Encouraging conscious consumer choices

ThreadLightly is an AI-powered fashion tool that **empowers consumers to shop consciously**, right at the point of purchase. With a simple photo of a clothing tag, users receive instant, easy-to-understand insights into the garment's profile, including labor practices, material impact, and overall sustainability scores.

The phone-based application offers sustainable alternatives, **supporting circular fashion brands** by connecting them with eco-conscious users.

Built based on behavioral science, ThreadLightly acts as a digital nudge, interrupting impulse buys and **encouraging better fashion choices**.

WHY NOW?

From Awareness to Action

Fast fashion is accelerating environmental harm and labor exploitation. Each year, the industry generates over **92 million tonnes of textile waste**, with toxic dyes polluting water sources and underpaid workers powering supply chains.

A study by Forbes confirms 62% of **Gen Z** prefer sustainable brands and 73% of **Millennials** are willing to pay more for sustainable products. However, there is a lack of quick, trusted tools when shopping. The window to make a difference is at the point of decision.

OUR SOLUTION

ThreadLightly utilizes AI, design, and nudges to guide conscious shopping in real-time.

Help users make better choices

- Take a picture of the materials tag and see material, labor, and environmental scores!
- Learn sustainable practices with quick tutorials and localized recycle guides.

Supporting sustainable brands

- Take a picture and find alternatives from sustainable brands!
- Earn rewards for making better purchases and completing goals and challenges!
